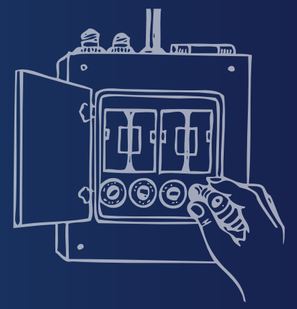
APEX SmartConnect Panel

INTRODUCTION

IoT solution for Health Monitoring of Fire Assets
Ensuring Compliance & Safety Across Industrial and Commercial Sectors

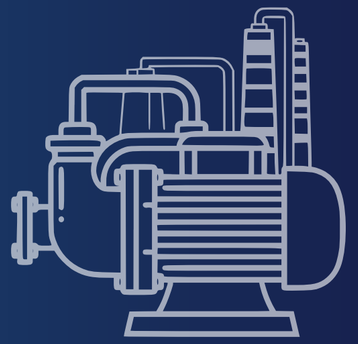
APEX
ENERGY CONTROL

Fire_IOT_ Panel monitors the health and status of multiple fire protection systems across facilities.



Types of systems monitored by IOT -

- Fire Alarm Panels
- Fire Hydrant Systems
- Sprinkler Systems
- Booster Pumps
- Gas Suppression Systems
- Fire Water Tank Levels
- Diesel Tank Level



Fire_IOT_Monitoring Panel helps industries:

Improve fire safety readiness

Monitor fire systems remotely

Maintain compliance with regulatory standards

Reduce manual inspection errors

APEX
ENERGY CONTROL

Product Introduction

- Fire IOT Panel is an advanced IOT-powered platform built to simplify the monitoring and maintenance of fire protection systems.
- Using intelligent sensors and GSM gateways, Fire IOT Panel delivers real-time cloud-based insights to ensure round-the-clock operational efficiency of critical firefighting infrastructure.
- Designed to improve compliance, accelerate emergency response, and streamline fault detection, Fire IOT Panel fills a vital gap in the fire safety and regulatory ecosystem—supporting both fire suppression and detection systems.
- Stay ahead with 24/7 monitoring and total control over your fire safety assets.

What we monitor?

- All monitored through our centralized cloud dashboard—accessible anytime, anywhere

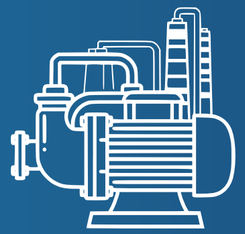
Water Level in Tanks

Fire Safety Audits & Training Compliance

Fire Alarms & Panels

Fire Hydrants

Gas Suppression System



Booster Pumps & Systems

Sprinkler Systems

System Key features

- **Real-Time Monitoring:** Continuous monitoring of fire protection assets.
- **Automatic Fault Alerts:** Immediate alerts when system faults occur.
- **Cloud Dashboard:** Centralized system visibility across multiple sites.
- **Maintenance Logs:** Automatic recording of system tests and maintenance.
- **Regulatory Compliance:** Supports documentation required for **Form B fire safety audits**.
- **Remote Access:** Authorized users can monitor systems through a secure web portal.

APEX
ENERGY CONTROL

The Apex Smart Connect Panel system Flow consists of field devices, Smart Connect Panel & a cloud monitoring platform.

Fire Alarm Panel

Fire IOT Gateway

Fire Fighting System

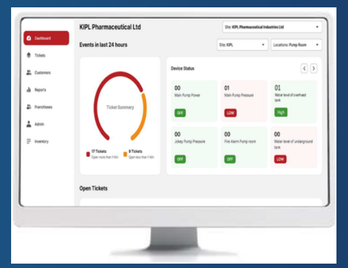
Email Alert

End User

GSM Network

Cloud Server

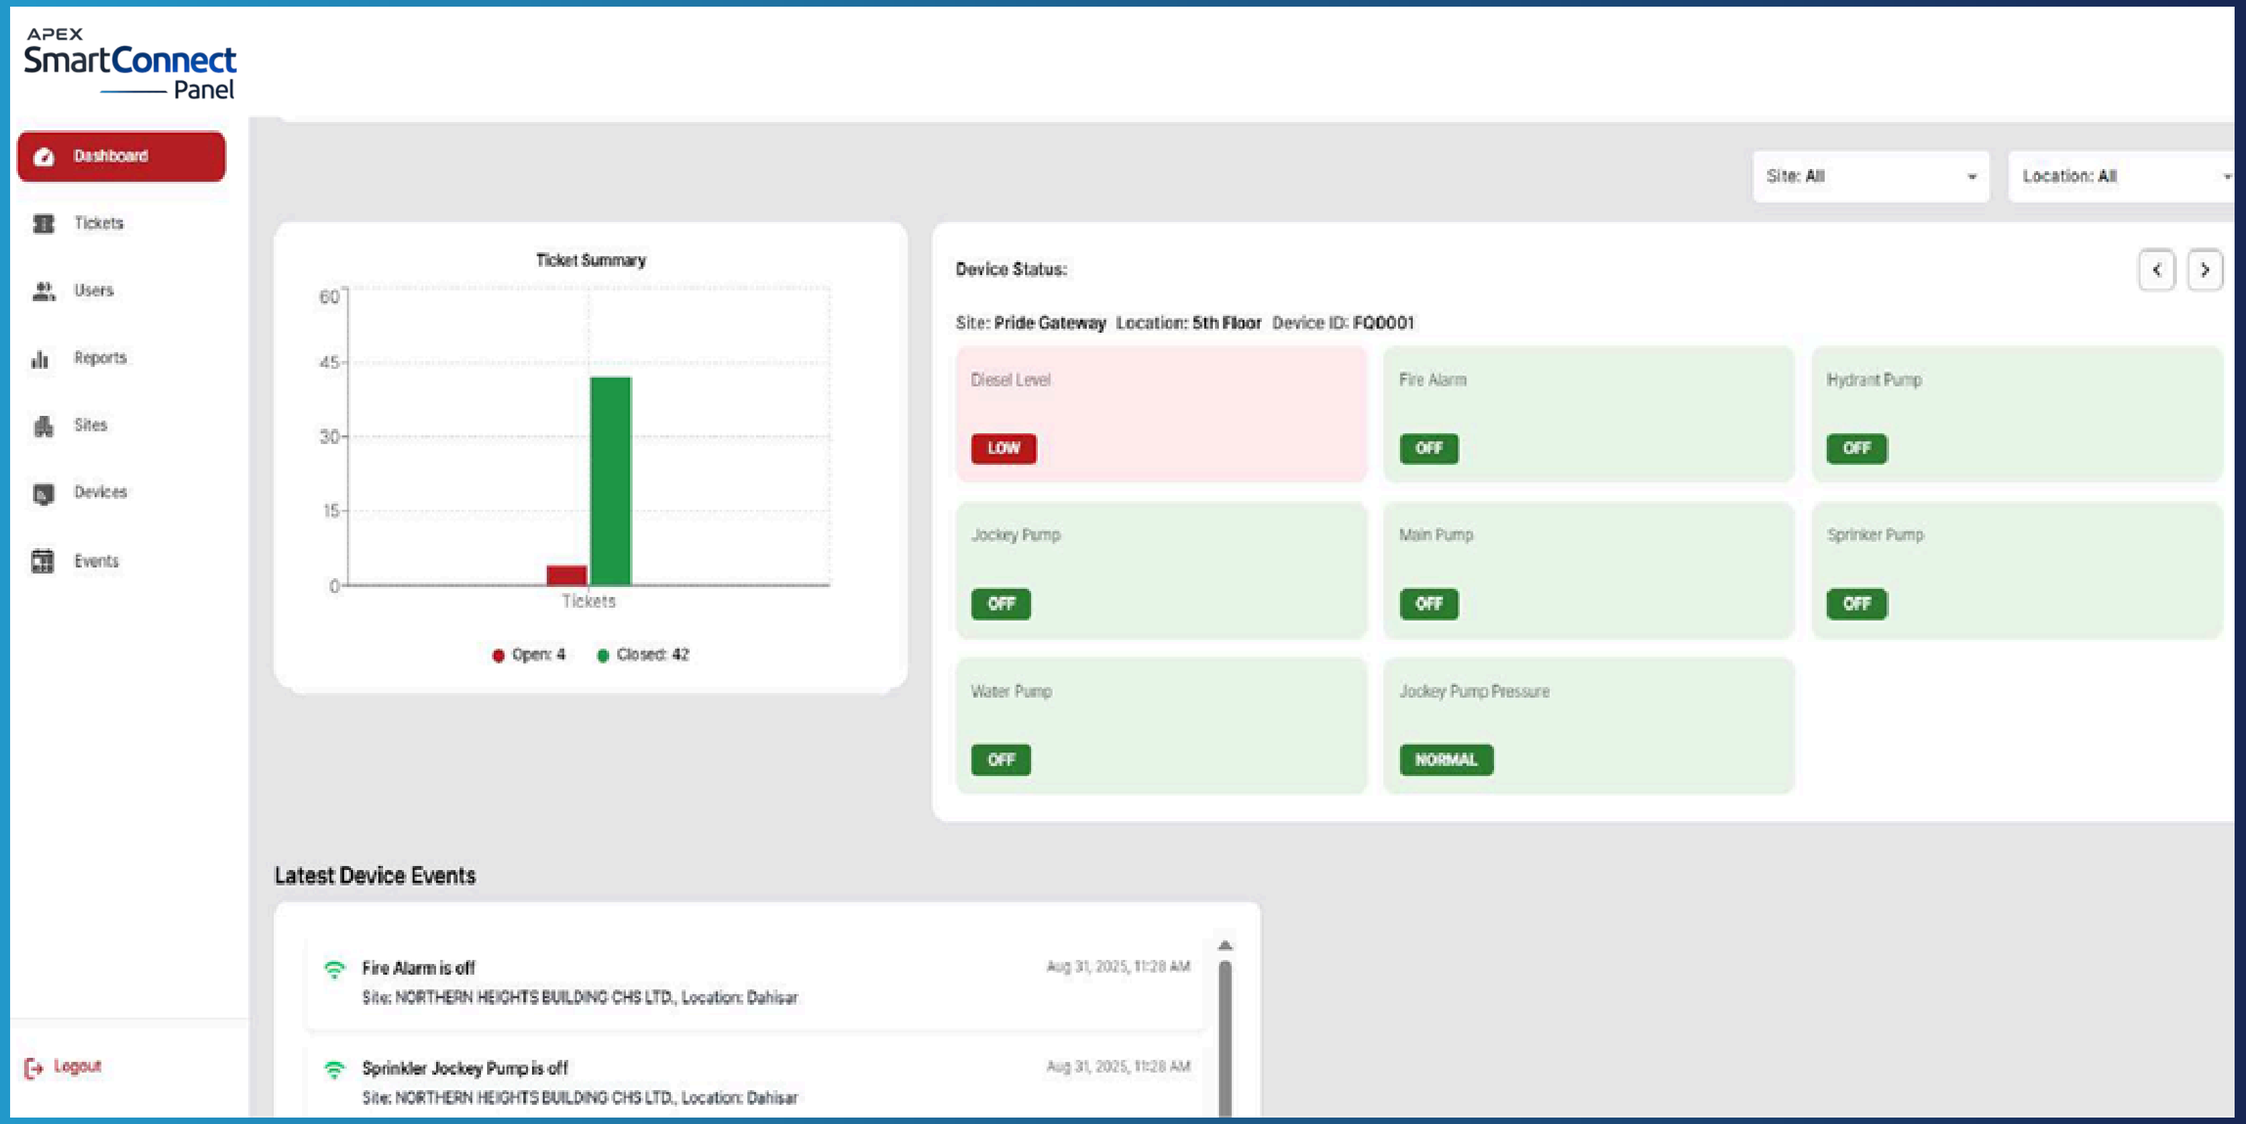
Monitoring Platform



Service Person

The IOT Device collects operational data from fire systems and sends it to the cloud platform for monitoring and analysis. **Dashboard Displays** System health status, Fire alarm activation, Water tank levels, Pump running status, Fault alerts

USERMonitoring Dashboard / Mobile App



Users can access the monitoring platform through a web browser or mobile application.

Alert and Notification System

When a fault or fire event occurs, Fire_IOT_Monitoring Panel automatically sends notifications.

Notification Methods

1. Mobile app alert
2. Email notification
3. SMS alert
4. Dashboard notification

Typical alerts include:

1. Pump failure.
2. Pump ON/OFF.
3. Fire alarm activation.
4. Low water level.
5. Communication failure.
6. System fault.

Industries We Serve

- Manufacturing & Industrial Units
- Corporate Campuses & IT Parks
- Residential High-Rises
- Warehousing & Logistics
- Banking & Financial Institutions
- Retail Malls, Hotels
- Hospitals & Healthcare Facilities
- MIDC Clusters
